Superseded v4 manuscript — retracted, kept for the record

Nothing in this directory is current. These are the manuscript, supplementary information, technical monograph and result tables of version 4 of this project, whose central claims were withdrawn after the audit recorded in `../../AUDIT.md`.

They are kept rather than deleted because the corrected analysis is only interpretable against a record of what it replaces, and because deleting the artefacts that contain a retracted claim makes the retraction harder to check rather than easier.

They are kept **here**, rather than beside the current paper, because `paper/main.pdf` gave a reader no indication that it had been withdrawn.

What is wrong with these documents

In short: they report commercial 28 nm silicon figures that were never measured, a human microscale tier built on a connectivity graph containing zero edges, sign-attributed motif results for two datasets with no usable inhibition, p-values below the resolution of the null ensemble that produced them, and an ablation table whose own control row contradicts the conclusion drawn from it. `AUDIT.md` gives the evidence for each.

What replaces them

`paper/computational_coupling_v5.tex` — *What Part of a Connectome Computes?* — built from `paper/sections/`, with every quoted number generated from a raw result file by `src/analysis/generate_numbers.py`. Rebuild it with `src/analysis/rebuild_paper.sh`.

Contents

File	Was
`main.tex`, `main.pdf`	the v4 manuscript
`computational_coupling_paper.pdf`	a build of the same manuscript
`supplementary_information.tex/.pdf`	v4 supplementary information
`computational_coupling_technical_monograph.tex/.pdf`	v4 technical monograph
`computational_coupling_manuscript.md`	the Markdown draft the v4 LaTeX came from
`tables/`	result tables quoted by v4, including the withdrawn ablatio
`figures/`	the 20 v4 figures, moved out of `paper/figures/` so that di
`figures_results/`	the same figures as written to `results/figures/` by the v4
`pitch/`	the v4 executive pitch dossier — **every hardware numbe**

Note that the `.tex` files here reference `figures/...` paths relative to the old `paper/` root, so they will not rebuild in place without adjusting those paths. They are kept as a record of what was claimed, not as a build target.
